Mojang Studios - Public Company Information

Mojang Studios is the Stockholm-based developer of Minecraft and has operated within Microsoft since its $2.5 billion acquisition in 2014. Its business includes game sales, intellectual-property licensing, Marketplace content, creator partnerships, and subscriptions such as Minecraft Realms and Marketplace Pass. Reported sales exceeded 350 million copies by April 2025. This scale, together with Minecraft's global, cross-platform community, makes service availability, account security, and protection of digital assets important business considerations.

This educational assessment uses likelihood-and-impact scoring informed by NIST SP 800-30 to examine twenty assets and risk areas. These include employee devices, source code, authentication systems, customer information, Realms infrastructure and backups, Marketplace transactions, software distribution, third-party services, and security records. The assessment combines public information with stated assumptions; it does not establish Mojang's actual internal architecture, controls, or risk exposure.

Several entries received inherent risk scores of twelve or sixteen, reflecting potentially significant consequences for confidentiality, integrity, availability, intellectual property, and reputation. The 2021 Log4Shell vulnerability affecting Minecraft: Java Edition illustrates the importance of vulnerability management and timely patching. Malware distributed through compromised third-party Minecraft mods in 2023 also illustrates ecosystem and supply-chain risks, without establishing that Mojang's own systems were breached.

Proposed treatments include encryption, multi-factor authentication, least-privilege access, network segmentation, endpoint protection, software signing, malware scanning, and centralized logging. Annual treatment costs are order-of-magnitude estimates rather than verified company expenditures. Under the assumed implementation of these controls, modeled residual risk scores range from three to nine, against proposed target ranges of one to four or four to seven. These figures are estimates—not measured reductions resulting from controls deployed or tested through this assessment. Third-party exposure has the highest modeled residual score, reflecting the assumed limits of direct control over external providers. Entries remaining above their targets require further treatment, justified acceptance, or reconsideration of the assumptions. Proposed ownership and response actions provide a basis for prioritization and future validation rather than evidence that the safeguards are already effective.

Company identity	Mojang AB (Mojang Studios) is the Stockholm-based developer of Minecraft. Microsoft announced its $2.5 billion acquisition of Mojang in 2014, and Mojang joined Microsoft Studios (now Xbox Game Studios).	Microsoft News Center	https://news.microsoft.com/source/2014/09/15/minecraft-to-join-microsoft/
Business model	Video-game and entertainment business. Revenue paths include sales and licensing of games and digital content, subscriptions, in-game/Marketplace purchases, and distribution through the wider Xbox ecosystem.	Microsoft Services Agreement	https://www.microsoft.com/en/servicesagreement
Business model	Minecraft Realms is a recurring cloud-hosted personal-server subscription. Bedrock plans are listed at $3.99 or $7.99 per month; Java Realms is listed at $7.99 per month.	Minecraft Realms	https://www.minecraft.net/en-us/realms
Business model	Minecraft Marketplace sells creator-made digital content through Minecoins. Mojang also operates a creator partner program, and Marketplace Pass/Realms Plus provide subscription access to rotating content.	Minecraft Partner Program	https://www.minecraft.net/en-us/partner
Critical assets	Minecraft intellectual property: trademarks, game code, art, world formats, proprietary development assets, and the Minecraft brand/franchise.	Microsoft acquisition announcement	https://news.microsoft.com/source/2014/09/15/minecraft-to-join-microsoft/
Critical assets	Player and customer data: names/contact details, email addresses, account credentials, payment data, subscription/license entitlements, purchase history, IP addresses, device identifiers, and connectivity/configuration data.	Microsoft Privacy Statement	https://www.microsoft.com/en-us/privacy/privacystatement
Critical assets	Account identity and access data: Microsoft account credentials, Xbox gamertags, purchase entitlements, multiplayer permissions, and account security settings.	Minecraft account guide	https://www.minecraft.net/en-us/article/how-create-minecraft-account
Critical assets	Player-created content and service data: Realm worlds, saves, backups, in-game content, and social/usage data associated with online play.	Minecraft Help - Realms backups	https://help.minecraft.net/hc/en-us/articles/28717462139149
Critical assets	Online-service infrastructure: authentication, Realms servers, storage, databases, load balancing, networking, monitoring, and availability systems.	AWS News Blog - Hosting Minecraft Realms on AWS	https://aws.amazon.com/blogs/aws/hosting-minecraft-realms-on-aws/
Critical assets	Marketplace creator content, partner submissions, Minecoin transactions, and the trust/safety processes used to review published content.	Minecraft Partner Program	https://www.minecraft.net/en-us/partner
Operations	Mojang's public company profile describes a partially remote workforce based in Stockholm and Redmond, with additional locations in London, Shanghai, and Tokyo.	Mojang Studios LinkedIn company page	https://www.linkedin.com/company/mojangstudios

Operations	Minecraft and Realms operate across PCs, consoles, and mobile devices. Bedrock supports cross-platform play across Windows, Android, iOS, Xbox, PlayStation, Nintendo, Amazon Fire, and Chromebook; Java supports Windows, macOS, and Linux.	Minecraft Realms	https://www.minecraft.net/en-us/realms
Operations	A publicly documented 2014 Realms deployment used AWS EC2, EBS, RDS, S3, Elastic Load Balancing, and multiple AWS Regions. Worlds and game state were stored in S3 at that time.	AWS News Blog - Hosting Minecraft Realms on AWS	https://aws.amazon.com/blogs/aws/hosting-minecraft-realms-on-aws/
Scale	Minecraft had sold more than 350 million units as of April 2025, according to Guinness World Records, which says the figure was confirmed by Mojang in the official Minecraft Annual 2026.	Guinness World Records	https://www.guinnessworldrecords.com/world-records/best-selling-video-game
Scale	Microsoft reported that Minecraft reached record monthly active usage and revenue in FY2025 Q4, but it did not publish a current Minecraft-specific monthly-active-user number in that disclosure.	Microsoft FY2025 Q4 earnings call	https://www.microsoft.com/en-us/investor/events/fy-2025/earnings-fy-2025-q4
Recent incident	Log4Shell / CVE-2021-44228 affected Minecraft: Java Edition in December 2021. Mojang patched official clients and Microsoft released a fix blocking the issue in Java Edition 1.18.1; self-hosted server operators also had to update or apply mitigations.	Microsoft Security Response Center	https://www.microsoft.com/en-us/msrc/blog/2021/12/microsofts-response-to-cve-2021-44228-apache-log4j2
Recent incident	In June 2023, malware was distributed through infected Minecraft mods/projects on CurseForge and BukkitDev. This was a third-party mod ecosystem incident, not evidence that Mojang's own network was breached.	CurseForge Support	https://support.curseforge.com/support/solutions/articles/9000228509-june-2023-infected-mods-detection-tool/!!!
Recent incident	Independent security reporting described the 2023 Fractureiser malware as an information stealer spread through compromised Minecraft mods and plugins.	BleepingComputer	https://www.bleepingcomputer.com/news/security/new-fractureiser-malware-used-curseforge-minecraft-mods-to-infect-windows-linux/
Recent incident	In January 2024, parent company Microsoft disclosed that Midnight Blizzard accessed a small percentage of corporate email accounts after password-spraying a legacy test tenant. Microsoft stated there was no evidence of access to customer environments, production systems, source code, or AI systems.	Microsoft Security Response Center	https://www.microsoft.com/en-us/msrc/blog/2024/01/microsoft-actions-following-attack-by-nation-state-actor-midnight-blizzard
Official website	Minecraft's official website is Minecraft.net. Mojang's official careers page is hosted within Minecraft.net and identifies Mojang AB / Microsoft branding.	Minecraft official site	https://www.minecraft.net/en-us

#	Risk ID	Risk or Asset	Proposed owner	Raw probability	Raw impact	#	Inherent Risk	Treatment	Estimated annual costs	Treated probability	Treated impact	Modeled residual risk	Target risk rating	Risk Treatment	Action
				(1to4)	(1to4)		row D x row E		Annual	Compare with E	Compare with G	row I x row J			Action
1		Company provided phones	CEO	4	3	12		1. Encyprtion of passcodes for employees to learn 2. Multiple authnitcaition methods (thumb/face & passcode) 3. Immediate reporting of loss or stolen of property	$10K	2	2	4	1-4	Remediation	1. Encyprtion of passcodes for employees to learn 2. Multiple authnitcaition methods (thumb/face & passcode) 3. Immediate reporting of loss or stolen of property
2		Company provided badges	CEO	4	4	16		1. Biometeric scnning along with required badge access 2. Abilitiy to deactivie badges once stolen or lost 3. Immediate reporting of lost or sotlen laptops	$10K	2	3	6	4-7	Remediation	1. Biometeric scnning along with required badge access 2. Abilitiy to deactivie badges once stolen or lost 3. Immediate reporting of lost or sotlen laptops
3		Storage items with Comapny IP	CEO	4	4	16		1. Encryption of password to access devices 2. Safe storage of Hashes of data to make sure the data or files are unchanged 3. Storage and access to the devices along with an in-depth tracking of location of device	$10K	2	3	6	4-7	Remediation	1. Encryption of password to access devices 2. Safe storage of Hashes of data to make sure the data or files are unchanged 3. Storage and access to the devices along with an in-depth tracking of location of device
4		Minecraft source code and game builds	CEO	3	4	12		1. Creating a firewall structure around the system to make it virtaully unbreakeable even by people with the correct acess codes 2. Making the source code only accessable from highly limited MAC Adresses. 3. Securing all valid MAC Adresses that can affect the source code and gamebuilds	$100K	2	4	8	4-7	Remediation	1. Creating a firewall structure around the system to make it virtaully unbreakeable even by people with the correct acess codes 2. Making the source code only accessable from highly limited MAC Adresses. 3. Securing all valid MAC Adresses that can affect the source code and gamebuilds
5		Microsoft account authentication and identity data	CEO	3	4	12		1. Encryption of users passwords 2. Limited availability to the structure of the account authentication process 3. Securing of the physical servers that host the account data	$100K	2	4	8	4-7	Remediation	1. Encryption of users passwords 2. Limited availability to the structure of the account authentication process 3. Securing of the physical servers that host the account data
6		Customer PII and purchase records	CEO	3	4	12		1. Encryption of user passwods, emails, billing informaiton 2. Focus on securing billing informaiton and not as much actual transactional information 3. Various unmarkerd servers around the world that host seperate partial data	$100K	2	4	8	4-7	Remediation	1. Encryption of user passwods, emails, billing informaiton 2. Focus on securing billing informaiton and not as much actual transactional information 3. Various unmarkerd servers around the world that host seperate partial data
7		Minecraft Realms worlds and backups	CEO	3	4	12		1. Continously running scans and monitoring realm data for any intrusions (IDS systems) 2. Updating a true back up of the realm every 2 days when it is being used, and keeping backups up to 20 days before deleting. 3. Make sure to keep access to the realm data limited to only higher management and support teams.	$100K	2	3	6	4-7	Remediation	1. Continously running scans and monitoring realm data for any intrusions (IDS systems) 2. Updating a true back up of the realm every 2 days when it is being used, and keeping backups up to 20 days before deleting. 3. Make sure to keep access to the realm data limited to only higher management and support teams.
8		Realms hosting infrastructure and databases	CEO	2	4	8		1. Continuously patch and harden hosting servers and databases 2. Limit production access with multi-factor authentication and least-privilege permissions 3. Maintain replicated backups and regularly test failover and data recovery	$1M	1	3	3	1-4	Remediation	1. Continuously patch and harden hosting servers and databases 2. Limit production access with multi-factor authentication and least-privilege permissions 3. Maintain replicated backups and regularly test failover and data recovery
9		Minecraft Marketplace and Minecoin transaction records	CEO	3	4	12		1. Encrypt Marketplace and Minecoin transaction records while stored and transmitted 2. Limit payment and Marketplace administrator access with multi-factor authentication 3. Continuously monitor transaction logs for fraud and unusual account activity	$100K	2	3	6	4-7	Remediation	1. Encrypt Marketplace and Minecoin transaction records while stored and transmitted 2. Limit payment and Marketplace administrator access with multi-factor authentication 3. Continuously monitor transaction logs for fraud and unusual account activity
10		Creator partner content and submission pipeline	CEO	3	4	12		1. Scan all creator submissions for malware and prohibited code before publication 2. Test creator content inside an isolated environment before approving the submission 3. Require verified creator accounts, version history, and approval before content is released	$100K	2	3	6	4-7	Remediation	1. Scan all creator submissions for malware and prohibited code before publication 2. Test creator content inside an isolated environment before approving the submission 3. Require verified creator accounts, version history, and approval before content is released
11		Game update and software distribution systems	CEO	3	4	12		1. Digitally sign every game update and verify file hashes before distribution 2. Limit build and release permissions with multi-factor authentication and separate administrator accounts 3. Monitor distribution systems and maintain a tested rollback copy of the previous stable release	$100K	2	4	8	4-7	Remediation	1. Digitally sign every game update and verify file hashes before distribution 2. Limit build and release permissions with multi-factor authentication and separate administrator accounts 3. Monitor distribution systems and maintain a tested rollback copy of the previous stable release
12		Mojang employee accounts and collaboration systems	CEO	4	4	16		1. Require multi-factor authentication and unique passwords for employee accounts 2. Limit account permissions and regularly disable unused or former employee accounts 3. Train employees against phishing and alert security teams about unusual login activity	$10K	2	3	6	4-7	Remediation	1. Require multi-factor authentication and unique passwords for employee accounts 2. Limit account permissions and regularly disable unused or former employee accounts 3. Train employees against phishing and alert security teams about unusual login activity
13		Development workstations and code-signing credentials	CEO	4	4	16		1. Encrypt development workstations and continuously patch and monitor them with endpoint protection 2. Store code-signing credentials in protected hardware with access limited to approved employees 3. Require approval for release signing and keep an audit log of every use of the credentials	$100K	2	4	8	4-7	Remediation	1. Encrypt development workstations and continuously patch and monitor them with endpoint protection 2. Store code-signing credentials in protected hardware with access limited to approved employees 3. Require approval for release signing and keep an audit log of every use of the credentials
14		Minecraft brand, trademarks, and licensing agreements	CEO	4	3	12		1. Store licensing agreements and trademark records in an encrypted centralized repository 2. Limit editing permissions and keep version history for all legal documents 3. Monitor for fraudulent domains, counterfeit content, and unauthorized use of the Minecraft brand	$10K	2	2	4	1-4	Remediation	1. Store licensing agreements and trademark records in an encrypted centralized repository 2. Limit editing permissions and keep version history for all legal documents 3. Monitor for fraudulent domains, counterfeit content, and unauthorized use of the Minecraft brand
15		Vulnerabilities and attacks sources on third-party cloud and platform vendor services	CEO	4	4	16		1. Perform security reviews of third-party vendors before granting access to Mojang systems 2. Require vendors to report vulnerabilities and incidents and to maintain supported, patched services 3. Maintain backups, alternate service options, and a documented plan for vendor outages	$100K	3	3	9	4-7	Remediation	1. Perform security reviews of third-party vendors before granting access to Mojang systems 2. Require vendors to report vulnerabilities and incidents and to maintain supported, patched services 3. Maintain backups, alternate service options, and a documented plan for vendor outages
16		Player chat, moderation, and trust-and-safety data	CEO	4	3	12		1. Encrypt chat and moderation records and restrict access to authorized trust-and-safety employees 2. Use automated filtering with human review and an easy process for players to report harmful content 3. Set retention limits and remove or anonymize player data when it is no longer needed	$1M	2	2	4	1-4	Remediation	1. Encrypt chat and moderation records and restrict access to authorized trust-and-safety employees 2. Use automated filtering with human review and an easy process for players to report harmful content 3. Set retention limits and remove or anonymize player data when it is no longer needed

#	Risk ID	Risk or Asset	Proposed owner	Raw probability	Raw impact	#	Inherent Risk	Treatment	Estimated annual costs	Treated probability	Treated impact	Modeled residual risk	Target risk rating	Risk Treatment	Action
17		Production monitoring, logs, and incident-response records	CEO	4	4	16	1. Store security logs in a centralized system that prevents unauthorized changes or deletion 2. Restrict log access with multi-factor authentication and least-privilege permissions 3. Back up important logs and regularly test incident-response procedures using recorded events	$100K	2	3	6	4-7	Remediation	1. Store security logs in a centralized system that prevents unauthorized changes or deletion 2. Restrict log access with multi-factor authentication and least-privilege permissions 3. Back up important logs and regularly test incident-response procedures using recorded events
18		Physical offices and on-site network equipment	CEO	3	4	12	1. Require badge access, visitor records, and camera monitoring for restricted office areas 2. Segment office networks and keep firewalls, wireless systems, and network equipment patched 3. Maintain an equipment inventory and lock servers and critical network devices in secure rooms	$100K	2	3	6	4-7	Remediation	1. Require badge access, visitor records, and camera monitoring for restricted office areas 2. Segment office networks and keep firewalls, wireless systems, and network equipment patched 3. Maintain an equipment inventory and lock servers and critical network devices in secure rooms
19		Customer-support tickets and account-recovery records	CEO	3	3	9	1. Encrypt customer-support tickets and remove unnecessary payment or identity information 2. Verify a player's identity before account recovery and require multi-factor authentication for support employees 3. Limit ticket access, log employee activity, and delete records after a certain retention period	$100K	2	2	4	1-4	Remediation	1. Encrypt customer-support tickets and remove unnecessary payment or identity information 2. Verify a player's identity before account recovery and require multi-factor authentication for support employees 3. Limit ticket access, log employee activity, and delete records after a certain retention period
20		Mojang public websites, APIs, and DNS records	CEO	4	3	12	1. Protect public websites and APIs with a web application firewall, limiting, and DDoS protection 2. Secure DNS and domain registrar accounts with multi-factor authentication and registry locks 3. Patch and scan public systems while continuously monitoring certificates, changes, and service availability	$100K	2	2	4	1-4	Remediation	1. Protect public websites and APIs with a web application firewall, limiting, and DDoS protection 2. Secure DNS and domain registrar accounts with multi-factor authentication and registry locks 3. Patch and scan public systems while continuously monitoring certificates, changes, and service availability

Probability	*Meaning*	*Impact*	*Meaning/Value*		*Risk Range*	*Meaning*		*Risk Treatment*	*Explanation*
4	likely every month	4	$ 1 million plus		12 to 16	Very High		Reduce	Take correct action
3	likely every year	3	100k-1 mil		8.1 to 12	High		Accept	I agree it is a risk, but I have no resources for now, so will live with it
2	likely every decade	2	10k - 100k		4.1 to 8	Medium		Ignore	Never!
1	likely every century	1	below 10k		1.1 to 4	Low		Transfer	Buy insurance
					0-1	Very Low		Mitigate	Similar to reduce - take alternative or indirect action
								Avoid	Don't do this business or activity (example new offshore cal centers - lets avoid)
